Gyoksel Nazifov Ahmedov

Full-Stack Developer

Profile

Full-stack developer with expertise in C#, Angular, REST APIs, and SQL — delivering clean, scalable solutions for web and desktop applications. Strong focus on performance, clean code, and user-friendly design.

Work Experience

2024 - Present
Obscene.Me
Full-Stack Developer

Developed a modern eCommerce platform with C#/.NET APIs and Angular front-end. Implemented secure checkout, RESTful services, and MSSQL stored procedures for order and product management. Focused on performance, scalability, and responsive UI design.

2023 - 2024
HellAuto.com
Full-Stack Developer

Built a specialized eCommerce store for automotive parts and services, integrating real-time inventory, advanced product filtering, and payment gateway solutions. Designed Angular UI and optimized .NET back-end with SQL for fast and reliable performance.

10/2021 - 04/2022
Comsy54 | Sofia
.NET Developer

Worked on web and desktop application development using C# and .NET Framework/Core. Designed and optimized MySQL, implemented REST APIs, and maintained existing enterprise systems. Collaborated with the team to deliver clean, maintainable, and scalable code.

Projects

Digital Signer NuGet – Open Source Project

Published a NuGet package for digital signing and verification. Provides reusable components for secure document signing with C#/.NET, improving developer productivity.

ngx-edge-slider – Angular Library

Created an open-source Angular 17+ slider component. Designed to be lightweight, flexible, and customizable, enabling developers to implement smooth and responsive image/content sliders.

Internal Messenger – Open Source Project

Built a lightweight messaging system with C# and .NET for internal team communication. Supports real-time chat, user authentication, and modular architecture.
